

REST API Reference

Complete endpoint documentation for the B2B Retailer Platform

Version 1.0 · June 2026 · Django REST Framework

14 Sections	60+ Endpoints	GET · POST · PUT · PATCH · DELETE	Base: /api/
-------------	---------------	-----------------------------------	-------------

Table of Contents	
1. Authentication	Retailer login, OTP, token refresh, logout
2. Store & Warehouse	Store discovery, nearest store, ERP config
3. Profile & KYC	User profile, KYC submission, password management
4. Products & Search	Product listing, search, categories
5. Recommendations	Personalised, top-selling, recently viewed
6. Cart	View, add, update cart items
7. Orders	Retailer and admin order management
8. Wishlist	Add, remove, move to cart
9. Address	CRUD, default address, checkout
10. ERP Integration	Token, item master, stock, sales orders
11. Notifications	Device token registration, push notifications
12. Credit Notes	Create, list, approve, reject
13. Wallet	View balance, apply to order
14. Location	GPS detect, save, retrieve

1. Authentication

SuperAdmin login · Retailer OTP login · Token lifecycle

POST

/api/auth/login/

SuperAdmin login with username & password. Returns JWT tokens.

POST

/api/retailer-auth/login/

Retailer login — sends OTP to registered mobile number.

POST

/api/retailer-auth/verify-otp/

Verify OTP received after retailer login attempt.

POST

/api/retailer-auth/resend-otp/

Resend OTP if the previous one expired or was not received.

POST

/api/retailer-auth/token/refresh/

Silent token refresh — exchange refresh token for a new access token.

POST

/api/auth/register/

Register a new user account.

POST

/api/auth/logout/

Logout — invalidates and blacklists the refresh token on the server.

POST

/api/otp/request_otp/

Request a standalone OTP (e.g. for phone verification).

POST

/api/otp/verify_otp/

Verify a standalone OTP.

POST

/api/auth/forgot-password/

Initiate password reset — sends OTP to registered email/mobile.

POST

/api/auth/verify-reset-otp/

Verify the password-reset OTP before allowing a new password.

POST

/api/auth/reset-password/

Set a new password after OTP verification.

PATCH

/api/auth/change-password/

Change password for a logged-in user.

Params: `user_id`

PATCH

/api/auth/superadmin-change-password/

Change password for the SuperAdmin account.

2. Store & Warehouse

Store discovery, nearest store lookup, ERP config, admin CRUD

GET

/api/admin/warehouses/

List all warehouses (admin).

POST

/api/admin/warehouses/

Create a new warehouse (admin).

GET

/api/admin/warehouses/

Retrieve a warehouse by ID (admin).

Params: `pk`

PUT

/api/admin/warehouses/

Full update of a warehouse (admin).

Params: `pk`

PATCH

/api/admin/warehouses/

Partial update of a warehouse (admin).

Params: `pk`

DELETE

/api/admin/warehouses/

Delete a warehouse (admin).

Params: `pk`

GET

/api/stores/

List all stores visible to a user.

Params: `user_id`

GET

/api/stores/

Retrieve a specific store for a user.

Params: `pk`, `user_id`

/api/stores/find-nearest//

GET

Find the single nearest store to the user's saved location.

Params: `user_id`

/api/stores/find-nearby//

GET

Find all stores within a configurable radius.

Params: `user_id`

/api/stores//details//

GET

Full store details including hours, contact, and stock status.

Params: `store_id`, `user_id`

/api/stores//erp-config//

GET

Retrieve ERP integration configuration for a store.

Params: `store_id`, `user_id`

3. Profile & KYC

User profile retrieval/update · KYC document submission & status

/api/profile/

GET

Get the profile of the currently authenticated user.

/api/profile/

PATCH

Update the authenticated user's profile fields.

/api/profile//

GET

Retrieve profile by explicit user ID (admin/internal).

Params: `user_id`

/api/kyc/submit//

POST

Submit KYC documents (Aadhaar, PAN, GST, etc.) for verification.

Params: `user_id`

/api/kyc/status/

GET

Get the current KYC verification status for the authenticated user.

4. Products & Search

Product catalogue, category browsing, search, related products

GET**/api/products/**

Retrieve the full product catalogue with pagination and filtering.

GET**/api/categories/**

List all product categories.

GET**/api/categories//**

List categories with user-specific context (pricing, availability).

Params: `user_id`**GET****/api/search//**

Search products by keyword for a specific user context.

Params: `user_id`**GET****/api/search/popular/**

Returns the most popular/trending search terms.

POST**/api/search/log/**

Log a user's search query for analytics.

GET**/api/products//related//**

Get related products based on category, for a specific user.

Params: `product_id`, `user_id`

5. Recommendations

Personalised recommendations and behaviour-driven suggestions

GET**/api/recommendations/for-you//**

Personalised product recommendations based on purchase history.

Params: `user_id`**GET****/api/recommendations/frequently-bought//**

Products frequently bought together with the user's past orders.

Params: `user_id`**GET****/api/recommendations/top-selling/**

Platform-wide top-selling products.

GET**/api/recommendations/popular/**

Most popular products across all retailers.

/api/recommendations/recently-viewed//

GET

Products the user recently viewed.

Params: `user_id`

/api/recommendations/user-activity//

GET

Summary of recent user activity (views, searches, purchases).

Params: `user_id`

6. Cart

View cart contents, add items, update quantities

/api/cart//

GET

Retrieve the current cart for a user.

Params: `user_id`

/api/cart/add//

POST

Add a product to the cart.

Params: `user_id`

/api/cart/item//

PATCH

Update quantity or variant for a cart line item.

Params: `item_id`

/api/cart/item//

DELETE

Remove a specific item from the cart.

Params: `item_id`

7. Orders

Retailer order history · admin order management · invoice download

/api/orders//

GET

List all orders placed by a retailer.

Params: `user_id`

/api/orders//invoice/

GET

Download the invoice PDF for a specific order.

Params: `order_id`

GET

/api/superadmin/orders/

List all orders platform-wide (SuperAdmin only).

8. Wishlist

Add/remove products, move items to cart

GET

/api/wishlist/

Retrieve the authenticated user's wishlist.

GET

/api/wishlist//

Retrieve wishlist by user ID.

Params: `user_id`

POST

/api/wishlist/add//

Add a product to the wishlist.

Params: `user_id`

DELETE

/api/wishlist/item//

Remove a product from the wishlist.

Params: `item_id`

PATCH

/api/wishlist/item//update/

Update wishlist item (e.g. note or priority).

Params: `item_id`

POST

/api/wishlist/move-to-cart/

Move one or more wishlist items into the cart.

9. Address & Checkout

CRUD for saved addresses · default address · checkout preview

GET

/api/address//

List all saved delivery addresses for a user.

Params: `user_id`

POST

/api/address/create//

Add a new delivery address.

Params: `user_id`

PUT

/api/address///

Full update of an existing address.

Params: `user_id`, `address_id`

DELETE

/api/address///delete/

Delete a saved address.

Params: `user_id`, `address_id`

PATCH

/api/address///default/

Set an address as the default delivery address.

Params: `user_id`, `address_id`

GET

/api/checkout/preview//

Preview order totals, taxes, and delivery before confirming.

Params: `user_id`

POST

/api/checkout/address/

Confirm checkout with a selected or new delivery address.

10. ERP Integration

Token generation · item master · stock · sales orders · customer creation

POST

/api/erp/ws_c2_services_generate_token

Generate an ERP service token for downstream API calls.

GET

/api/erp/ws_c2_services_get_master_data//

Fetch item master data from ERP for a user.

Params: `user_id`

GET

/api/erp/ws_c2_services_get_master_data

Fetch item master data without a user context.

POST

/api/erp/update_product_info/

Push updated product info (price, description) to ERP.

POST

/api/erp/upload_product_image/

Upload and sync a product image to ERP.

GET

/api/erp/ws_c2_services_fetch_stock

Fetch current stock levels from ERP.

POST

/api/erp/ws_c2_services_create_sale_order

Create a sales order in ERP. Accepts use_wallet param.

POST

/api/erp/ws_c2_services_gl_cust_creation

Create or sync a GL customer record in ERP.

GET

/api/erp/ws_c2_services_get_orderstatus

Fetch real-time order status from ERP.

11. Notifications

Device token registration · retailer notification inbox

POST

/api/notifications/register//

Register a device FCM/APNs token for push notifications.

Params: `user_id`

POST

/api/notifications/register/

Register a device token without a user ID (anonymous).

GET

/api/retailer-notifications/

List all notifications for the authenticated retailer.

GET

/api/retailer-notifications/count/

Get the unread notification count for the retailer.

GET

/api/retailer-notifications//

Retrieve a single notification by ID.

Params: `notification_id`

12. Credit Notes

Retailer credit note requests · admin approval workflow

/api/credit-notes/order-products//

GET

Get products from a past order eligible for a credit note.

Params: `user_id`

/api/credit-notes/create//

POST

Submit a new credit note request.

Params: `user_id`

/api/credit-notes//

GET

List all credit notes for a retailer.

Params: `user_id`

/api/admin/credit-notes/

GET

List all credit notes platform-wide (admin).

/api/admin/credit-notes//

GET

Retrieve a single credit note (admin).

Params: `credit_note_id`

/api/admin/credit-notes//approve/

POST

Approve a credit note and credit the retailer's wallet.

Params: `credit_note_id`

/api/admin/credit-notes//reject/

POST

Reject a credit note request with a reason.

Params: `credit_note_id`

13. Wallet

View balance · apply wallet credits during order placement

/api/wallet//

GET

Retrieve current wallet balance and transaction history.

Params: `user_id`

/api/wallet/apply//

POST

Apply wallet credits to an active order (legacy). Prefer `use_wallet` param in `/erp/ws_c2_services_create_sale_order`.

Params: `user_id`

14. Location

GPS-based address detection · save & retrieve user location

POST

/api/location/detect/

Detect address from GPS coordinates (anonymous). Returns address + nearest store.

POST

/api/location/detect//

Detect address and save to user profile.

Params: `user_id`

GET

/api/location/me//

Retrieve the last saved location for a user.

Params: `user_id`

POST

/api/location/save//

Explicitly update the saved location for a user.

Params: `user_id`

GET

POST

PUT

PATCH

DELETE
